Quarterly Report: Compliance Audit

Executive Summary

This document summarises the quarterly compliance audit for the period ending March 31. Findings are organised by severity, with critical issues escalated to the audit committee. All recommendations are tracked through the remediation portal and reviewed weekly.

Key Findings

The audit surfaced three categories of findings:

- Access-control gaps in the shared accounting drive
- Outdated encryption on archived customer correspondence
- Missing audit logs for third-party API integrations

Recommended Remediation Steps

We propose the following actions, in priority order:

1. Rotate access keys on the shared drive within five business days.
2. Re-encrypt archived correspondence with AES-256 and rotate KEKs.
3. Enable verbose audit logging on all third-party API connectors.

Conclusion

The findings are tractable within the current quarter given adequate engineering capacity. A follow-up audit is scheduled for the end of the next quarter to verify remediation.
